

FORT KNOX

SAFES ✦ VAULTS

BUYING GUIDE | CATALOG | 2024

OUR STORY

Fort Knox was founded in 1982 by Tom James, with a mission to protect firearms from unwanted hands. To this day, we remain family owned and operated, expanding our commitment to safeguard not just firearms, but also cherished memories, heirlooms, and valuables. This journey has solidified our position as the gold standard in security, with a dedication to American quality, ingenuity, and integrity. Today, over four decades later, our unwavering commitment to protecting your legacy echoes the enduring spirit of our founder and the principles that have guided us from the beginning.

01. SIZE OPTIONS

Consider the following questions to ensure you get the most out of your Fort Knox Safe

How Do I Choose the Right Size?

Evaluate the size, shape, volume, and nature of your valuables, as these factors will significantly influence the size and interior configuration of your safe. Consider the number of firearms you own and anticipate the future growth of your collection by selecting a safe larger than your current needs. This will ensure space for your expanding collection.

Fort Knox provides multiple interior configurations, including jewelry cabinets, offering versatile options to organize and preserve your distinctive collection effectively. See Interior Configurations on pg. 14

Where Will The Safe Be Installed?

Measure your intended destination to ensure you purchase the correct size. All Fort Knox safes have an overall depth of 29" or less, so the safe will fit through the average door frame. Consider left vs. right swing and internal vs. external hinges. We recommend anchoring your safe down for added safety and security.

What Are the Limitations on Delivery?

Limitations such as ceiling height, stairs, turns, landings, and the size/weight of the safe can make some installations difficult. If you have any questions about delivery or install, please contact Fort Knox.

02. BODY STEEL THICKNESS

100% of Fort Knox Products are Proudly Manufactured in the USA, with Thick American Steel

What Makes The Construction Of Fort Knox Safes Different?

Fort Knox safes and vaults begin as thick sheets of metal that are machine folded to minimize joints; then, the remaining seams are welded both internally and externally for 100% penetration, creating a seamless, durable, solid steel enclosure.

What is Overall Steel Body Thickness?

The combined thickness of the outer steel body and the inner steel liners determine a safe's overall body thickness. For example, the Titan consists of a 3/16" steel body and a 3/16" ArmaKnox AR500 Package

resulting in a combined thickness of 3/8". Refer to the chart below for a comprehensive breakdown of the overall steel body thickness in our safes.

Can I Upgrade My Steel Thickness?

Upgrade your security by adding additional layers of torch-resistant Stainless Steel, cut and drill resistant ArmaKnox AR500 Steel, or multiple layers of Carbon Steel to the interior. Add up to a total of 4 additional steel liners, increasing the overall body thickness creating a safe within a safe.

Upgrade details available on page 11.

03. DOOR STEEL THICKNESS

What Is Door Edge Thickness?

Door Edge Thickness is found by combining the security door plate(s) thickness with the thickness of the door jacket.

What is a Hard Plate?

The **Hard Plate or Mounting Plate** is a reinforced, hardened steel plate that protects your lock and Relocker from cutting and drilling attacks.

What Are Multiple Relockers?

Multiple Relockers are a defensive mechanism that will activate if an intruder attempts to cut the door, rendering it inoperable and keeping intruders out.

Why Is The Security Plate Important?

The security plate, or door plate, is a heavy sheet of steel welded inside the 10ga door jacket. The plate covers 100% of the door face, adding strength, security and maintaining the integrity of the door during a fire or breach attempt.

Refer to the chart below for a comprehensive breakdown of our doors composition.

Can I Upgrade My Security Plates?

You can increase the number of plates, and thickness of steel used in your safe door, including Carbon steel, Stainless steel, and ArmaKnox AR500.

Upgrades and Inner Steel Liners can be found on pg. 11

04. FIRE PROTECTION

Sleep Well Knowing the Reliable Fire Protection System Fortifies the Walls Of Your Fort Knox Safe.

How's Fort Knox Fire-Protection Different?

At Fort Knox, our commitment to crafting top-tier fire protection sets us apart. Here's how we achieve it:

- Type-C Fireboard
- Thermal Barrier
- Welded Anchors
- Smoke Seal
- Fire Seal
- Security Plate
- Thicker Steel
- Solid Welded Seams

For a comprehensive breakdown see page 9

How Much Fire Protection Do I Need?

Consider the following when selecting your safes fire protection: The average house fire can exceed temperatures of 1,500°F, and can burn for more than an hour. We offer fire protection up to 1,680°F in 90 minutes. For increased fire protection choose a model with 2hr fire rating or upgrade with a Reinforced Fire Liner for the same protection.

RFL is not available on Spartan or Maverick models.

How Are the Safes Fire Tested?

Fort Knox safes are subjected to an intense house fire simulation. The safe is monitored by nine thermocouple sensors that are placed evenly from top to bottom as per UL72 standards. The test is terminated once the first sensor reaches 350°F, we then document the duration, and external temperature to get our fire rating. The results shown are for up to 1,680°F in 90 Minutes.

Add Reinforced-Fire-Liner for up to 2hr Protection! Not available on all models. More Info On Page 12

MODEL:	SPARTAN	MAVERICK	DEFENDER	PROTECTOR	EXECUTIVE	GUARDIAN	TITAN	LEGEND	HOME SAFE	VAULT DOOR IN-SWING	VAULT DOOR OUT-SWING
FIRE RATING	1,200° F In 60 Min	1,200° F In 75 Min	1,680° F In 90 Min	1,680° F In 90 Min	1,680° F In 90 Min	1,680° F In 90 Min	1,680° F In 90 Min	1,680° F In 90 Min	1,680° F In 120 Min	N/A	N/A

SECURITY PLATE

Fort Knox Security Plates ensure the door retains its shape, creating a resilient barrier against the encroaching flames. The heat from fire will cause a thinner safe to warp, breaking the fire seal, allowing destructive flames to penetrate.

SMOKE & FIRE SEAL

There are 2 seals around the perimeter of the safe door, the **Smoke Seal** keeps smoke, heat, and caustic residue at bay. The **Fire Seal** blocks fire from entering by activating Palusol, which expands at 212°F.

THERMAL BARRIER

Thermal Barrier is a dead air gap between the outer wall and the Type-C Fireboard created by the welded anchors. This gap significantly slows down the external transfer of heat into your safe during a fire.

TYPE-C FIREBOARD

Fort Knox uses **Type-C Fireboard** that includes Vermiculite, a shrinkage compensating additive of blended fibers, that maintain structure and fire resistant properties ensuring your valuables are protected. Some manufacturers use only common drywall.

WELDED ANCHORS

Glue can melt during a fire causing fireboard to slump away from safe walls, leaving your valuables vulnerable to the flames. Fort Knox secures your fireboard using **Welded Anchors** to ensure the longevity, and efficacy of your fire protection.

05. UPGRADES & PACKAGES

Fortify Your Safe with Added Security and More Fire Protection for Maximum Defense.

SECURITY STEEL UPGRADE:

Add Up To Four Security Liners

ARMAKNOX AR500 PACKAGE

ArmaKnox AR500 is made of heavy 7ga steel plates that cover all 6 sides of the safe. This hardened steel creates a cut, drill, and ballistic resistant barrier between your valuables and potential security breaches.

STAINLESS STEEL PACKAGE

The Stainless Steel Package reinforces all 6 sides of the safe with a 10ga stainless steel barrier for the highest protection against a torch attack.

CARBON STEEL LINER

Increase the security of your safe by fortifying its walls with 10ga steel plates. Add up to four additional layers of steel, creating a significant obstacle that will waste valuable time for potential burglars.

STEEL BODY/DOOR UPGRADE

Body Upgrade: increase the steel body thickness of the safe. *Ex. 10ga up to 3/16", or 3/16" up to 1/4"*
Door Upgrade: add an additional 1/8" steel security plate to your door. *Not Available on all models/sizes.*

FIRE PROTECTION UPGRADE:

Upgrade with RFL for the Ultimate Fire Protection

UP TO 1680F
IN 120 MINUTES

REINFORCED FIRE LINER (RFL)

Upgrade your fire protection by adding additional Type-C fireboard to all 6 sides of your safe for up to 2 hours of fire protection.

Adding RFL Reduces Gun Capacity, RFL not available on Maverick or Spartan Models

10. SECURITY BOXES

ORIGINAL PISTOL BOX

The Heaviest Pistol Box on the Market

The Original Pistol Box meets the requirements of the California Firearms Safety Device Regulations. Ideal for mounting. Accommodates most sized pistols with extra mags. Foam pad lined for pistol protection.

- EXTERNAL DIMENSIONS: 10½"L X 12½"W X 5"H
- QUICK-ACCESS, MECHANICAL LOCK
- STURDY 10-GAUGE BODY, 3/16" WRAP-AROUND DOOR
- 22 lbs

AUTO, PERSONAL & SHOTGUN BOXES

Protect your valuables

Featuring a durable 10-gauge body and a resilient 3/16" plate door. Choose from three sizes: the compact 6" deep Auto, perfect for car center consoles, the versatile 12" deep Personal, and our largest at 45" deep, Shotgun box, ideal for easy access to your firearms.

- AUTO PISTOL BOX: 6"L X 9½"W X 5"H, 13LBS
- PERSONAL PISTOL BOX: 12"L X 9½"W X 5"H, 20LBS
- SHOTGUN BOX: 45"L X 9½"W X 5"H, 54LBS

CONTROLLED ACCESS BOX

Privacy Lock Box

Our largest Security box, The Controlled Access boxes are great for storing ammo and other valuables. They can be used as a standalone security container or inside your safe for an additional layer of security. Available in 3 sizes for your convenience.

- CAB20: 13"L X 20"W X 8"H, 43LBS
- CAB20 FITS ON TOP OF 6026, OR INSIDE 6026
- CAB24: 15"L X 24"W X 8"H, 55LBS

VAULT DOOR FAQ'S

HOW DO I PREPARE FOR MY VAULT DOOR?

To ensure you order the correct door, carefully collect the following measurements:

Rough Opening: Concrete to concrete opening where the door will be installed. Vault door size is the same as your rough opening dimensions. Standard rough openings:

82"H X 40"W, or 82"H X 48"W

Wall Thickness: Measure the thickness of the wall the Door will be mounted to. Wall thickness **must** be specified at time of order. Frame will be built based on the info you input.

Overall Face Dimensions: Clear framing and sheet rock 6" around rough opening to make space for the Door Frame.

Vault Door Size: **8240**, Overall Face: **85" x 45"**

Vault Door Size: **8248**, Overall Face: **85" x 56"**

HOW DO I DECIDE IN-SWING VS. OUT-SWING?

In-Swing doors can be used as a storm shelter or panic room in the event the door is blocked from the outside. The In-Swing Door is also ideal for hiding or concealing the location of your vault. Out-swing offers 180 degree opening radius and benefits those with limited vault room space.

WHAT IS RIGHT SWING VS. LEFT SWING?

We define right vs left swing based on which side the hinges are on. Standing outside the room facing the front of the door, Right swing has hinges on the right side.
